## Introduction

Devolop a custom made compression box to achieve a higher quality of care for the patients with a VLU and achieve cost reduction.

#### Methods

Retrospective study among patients with a VLU who received compression therapy in communitycare of Evean Zorg in the region Zaanstreek-Waterland in 2007. And the costs needed to apply this therapy. There has also been an inventarisation among patients and nurses which, and how many products are needed to give this patient group the optimal care.

#### **Results**

257 patients with a VLU receiving compresstiontherapie in 2007. The average costs per patient was  $\in$  144,18. Most of the time both legs needed compression therapy, thats why the standard prefabricated boxes are not enough and reorders are neccesary for seperate parts. Besides that other products are missing like: skintreament, gloves, mats, garbagebags.

A custom made Evean compressionbox is created. This box contains all the needed products for two legs. In this box there are enough products for the treatment for the total period which the patient needs compression therapy containing enough bandages, skintreatment and other products.

The price is  $\in$  99,00 which is cheaper than the average costs of the results in the retrospective study in 2007.

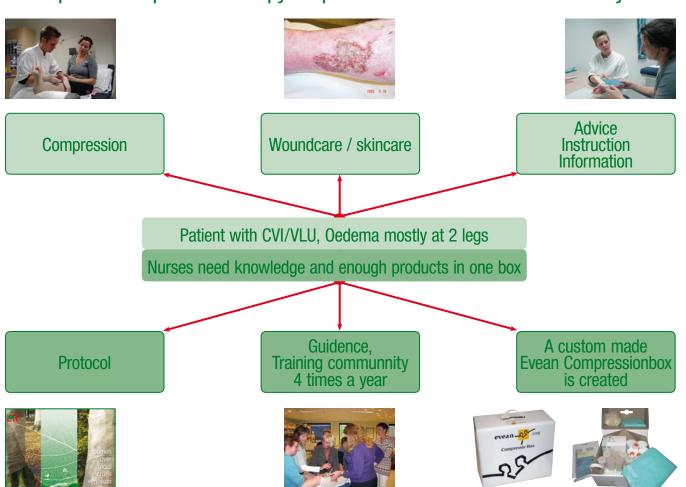

### **Discussion**

The costs for local woundtreatment is not evaluated.

#### Conclusion

A custummade compressionbox provides beside costeffectiveness also a higher quality of care to the patients with a VLU. This box provides all the products at once to give an optimal compressiontherapy for patients with VLU in the communitycare.

# An optimal compressiontherapy for patients with VLU in the communitycare

Devolop a custom made compression box to achieve a higher quality of care for the patients with a VLU and achieve cost reduction. The average costs per patient was €144,18.

Most of the time both legs needed compression therapy.

Besides that other products are missing like: skintreament, gloves, mats, garbagebags.

In this box there are enough products for the treatment for the total period which the patient needs compression therapy containing enough bandages, skintreatment and other products.

The price is € 99,00 which is cheaper than the average costs of the results in the retrospective study in 2007.

Cost reduction - higher quality of care
